Student Admission Enquiry System

Workflow Automation & Form Design using Deluge Scripting

Experiment No: 5 (Automating business processes using Deluge scripting and workflows, with application testing and debugging.

Name: Hoshni Sivaprakash
Department: CSBS
Roll No: 241401029

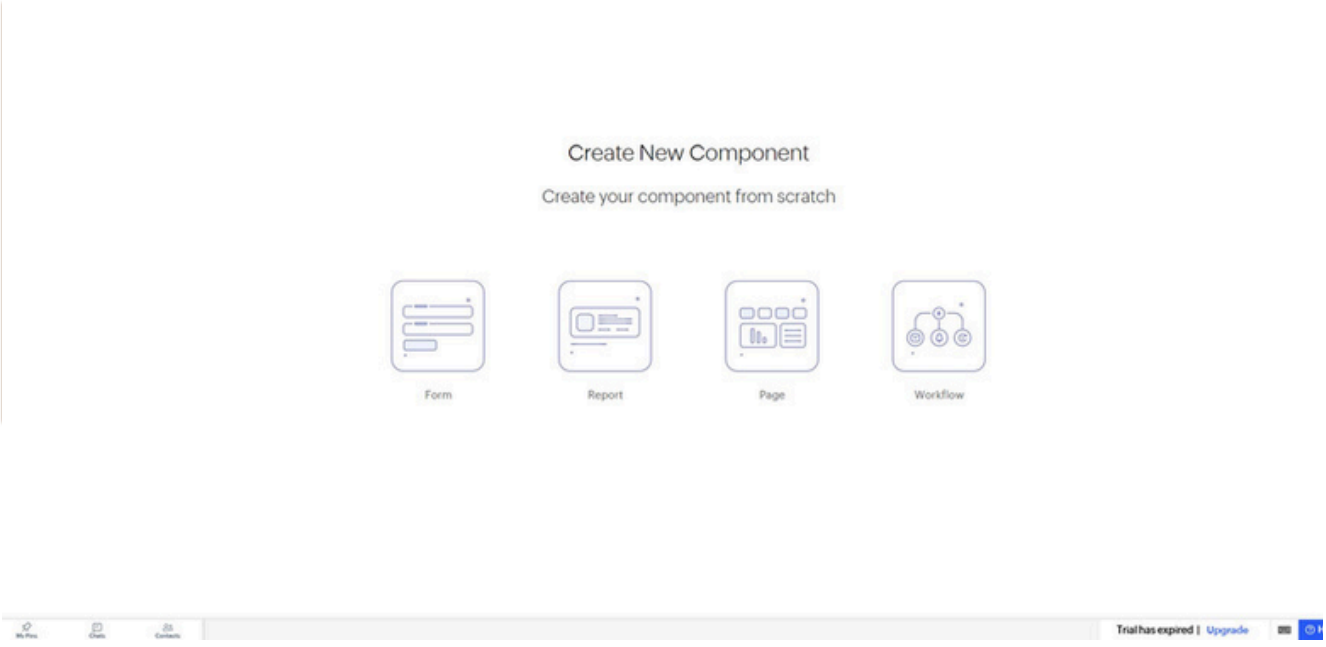

1. Aim

To automate the approval and notification process of the **"Student Admission Enquiry Form"** application in Zoho Creator using Deluge scripting, so that every admission enquiry submitted by a student is automatically routed for review, and the concerned student is notified by email the moment the application is approved or rejected — without any manual intervention from the admissions desk.

2. Procedure

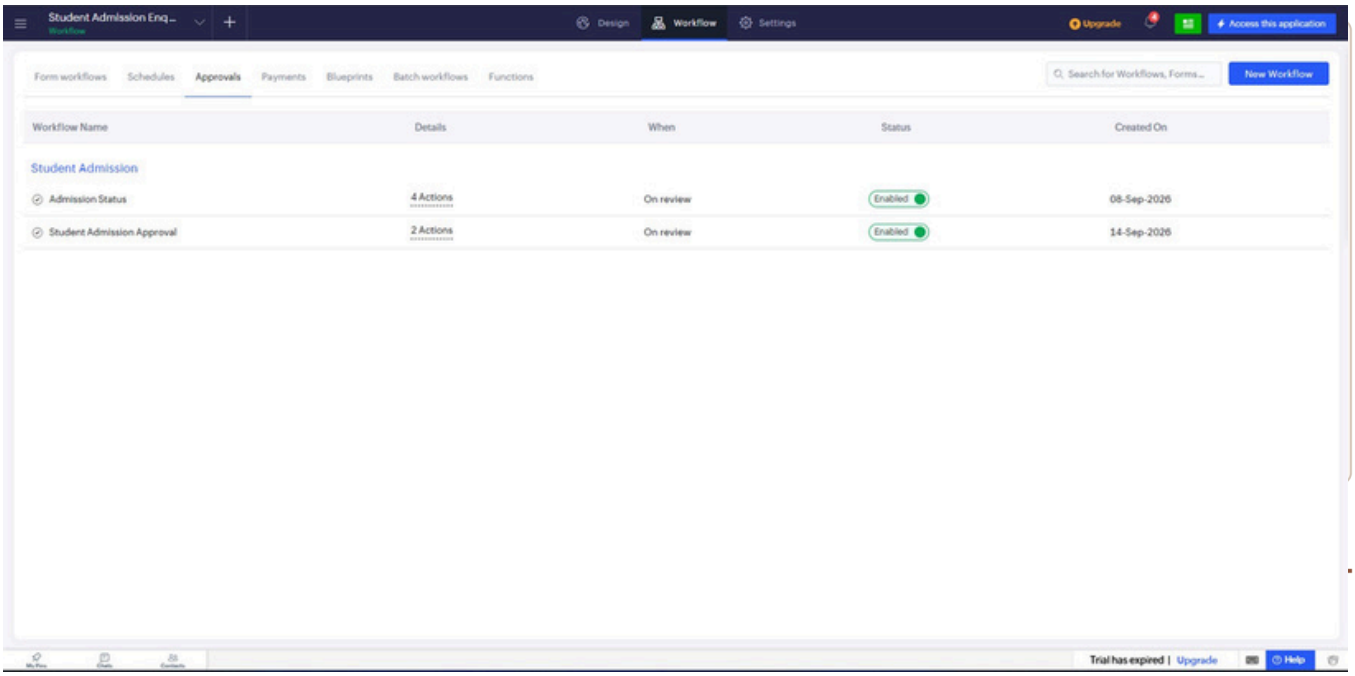

2.1 Creating the Approval Workflow

1. Open the *Student Admission Enquiry Form* application and click the "**+**" icon to open the **Create New Component** screen. Four component types are offered: Form, Report, Page, and Workflow. **Workflow** is selected to begin building the automation.

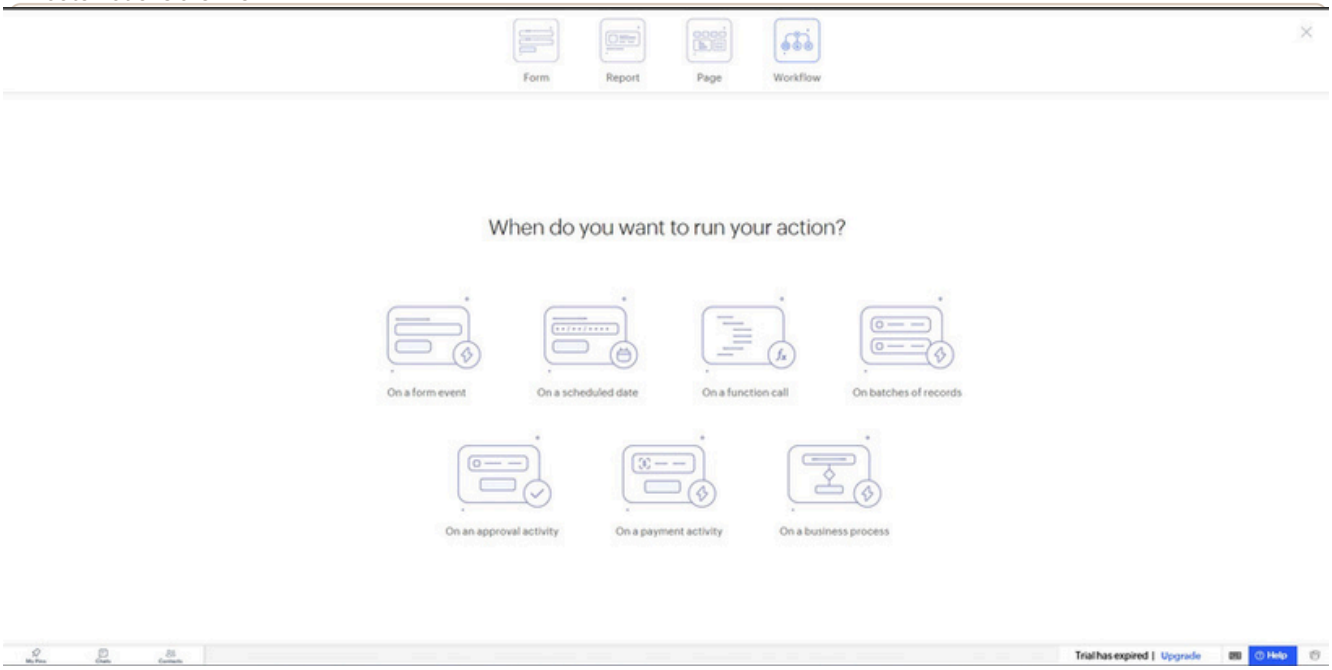

Explanation: This screen is the entry point for every new automation in Zoho Creator. Choosing "Workflow" here opens the workflow builder, where the trigger and the target form are configured next.

2. Inside the Workflow tab, the **Approvals** section is opened and the form "Student Admission" is chosen as the target form. Two workflows were configured against this form: **"Admission Status"** (4 Actions, triggered On review) and **"Student Admission Approval"** (2 Actions, triggered On review). Setting the process to run "Always" ensures every new enquiry automatically enters the approval chain.

Explanation: Lists both approval workflows tied to the Student Admission form — Admission Status handling broader status actions and Student Admission Approval handling the core accept/reject decision. Both being Enabled confirms automations are live.

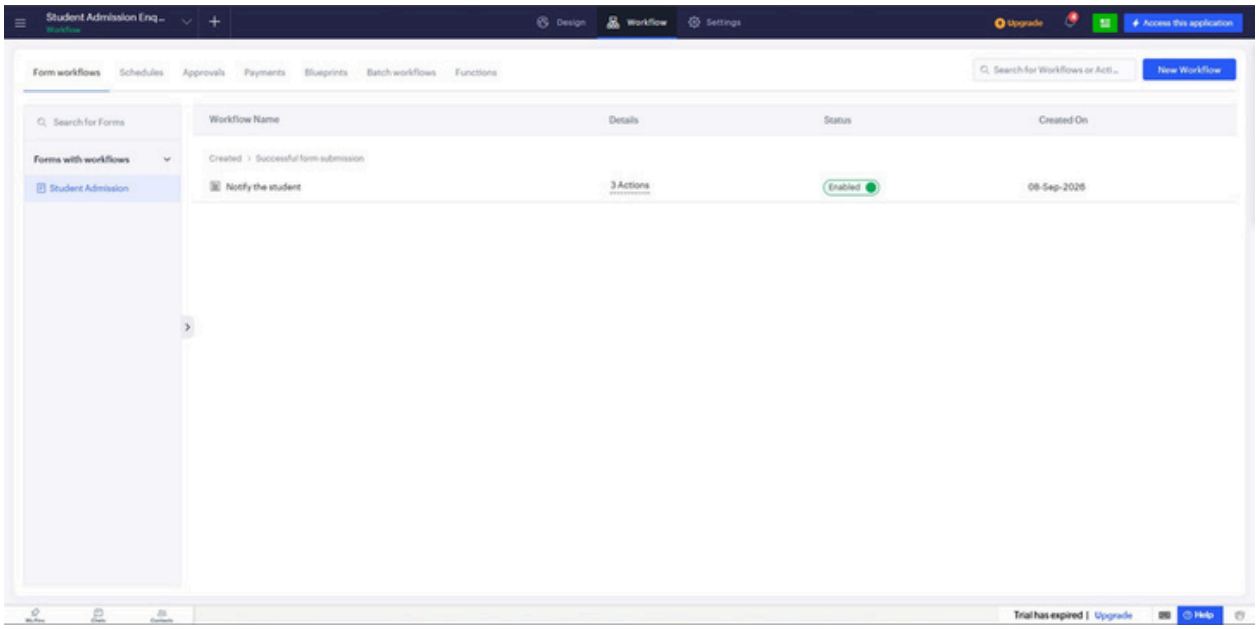

Explanation: Selecting "On an approval activity" ties the Deluge notification script directly to the decision outcome (Approved/Rejected), preventing unnecessary triggers on routine form edits.

2.2 Choosing the Trigger and Writing the Deluge Script

3. When adding a new action, Zoho Creator asks *"When do you want to run your action?"*. The available options are On a form event, On a scheduled date, On a function call, On batches of records, On an approval activity, On a payment activity, and On a business process. For this automation, **On an approval activity** is selected so the Deluge script executes right after a request is approved or rejected.

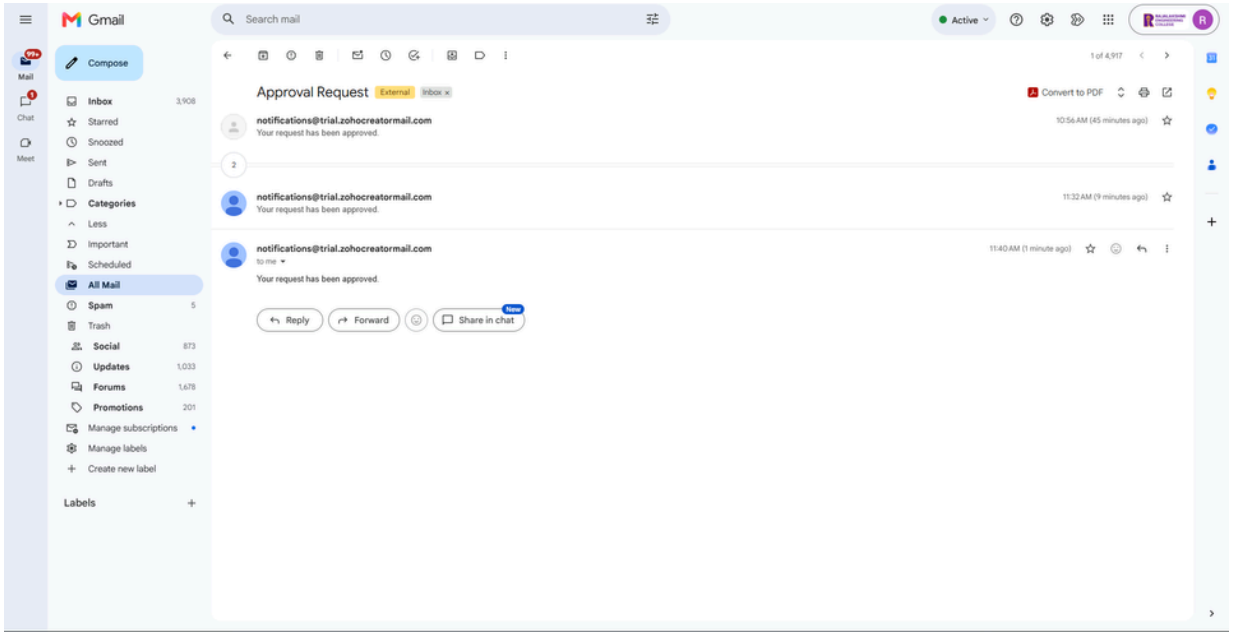

4. In parallel, a form-level workflow named **"Notify the student"** (3 Actions) is created under *"Created > Successful form submission"* so that the moment a new enquiry is submitted, an instant acknowledgment is sent automatically, independent of the approval decision.

Explanation: This form-level workflow ensures every applicant receives immediate feedback confirming their enquiry was logged into the institutional database.

2.3 Verifying Email Notifications

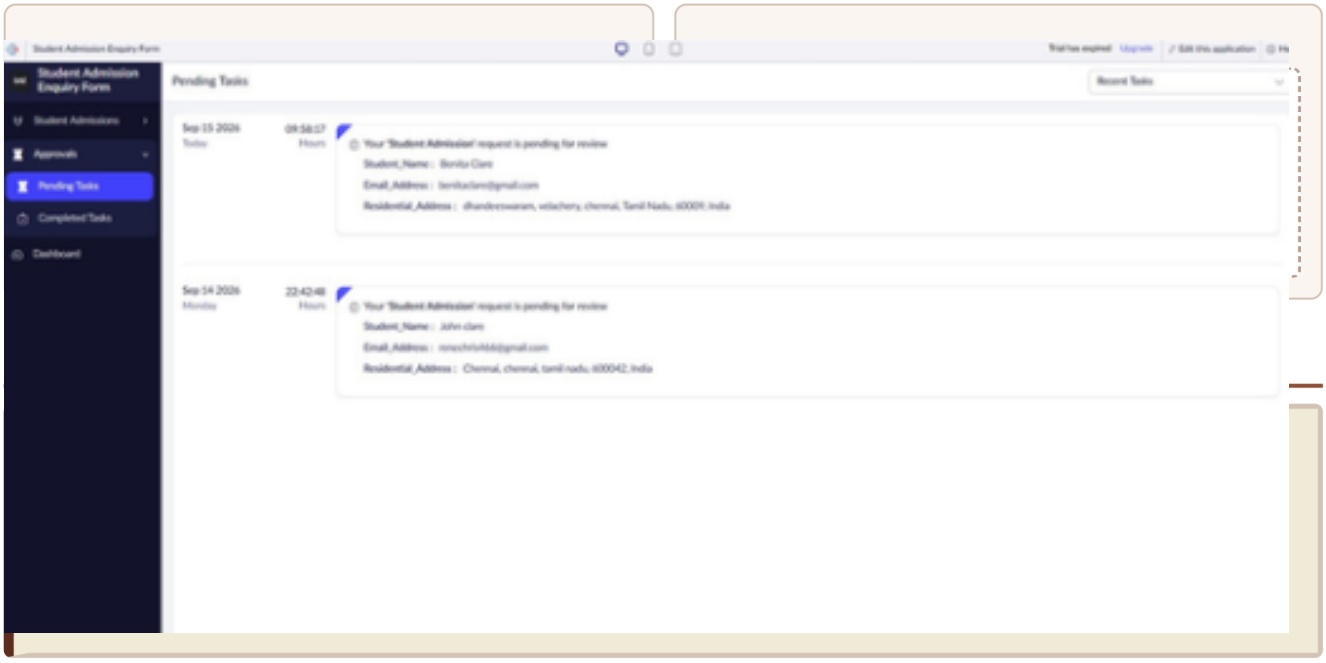

5. To confirm that the Deluge script triggers notifications seamlessly upon decision recording, the linked Gmail inbox is verified. A series of "Approval Request" emails from *notifications@trial.zohocreatormail.com* were received, carrying the automated message **"Your request has been approved"**.

Explanation: Confirms that the Deluge script executes without error, reading the applicant's email address and dynamically dispatching the approval status.

3. Output & Task Verification

Once published, admission requests flowed into dedicated review dashboards. The reviewer can monitor active requests under **Pending Tasks** and historical decisions under **Completed Tasks**.

4. Result

> **Experiment Conclusion:**
>
> An approval-driven workflow automation was successfully designed and deployed for the "**Student Admission Enquiry Form**" application using Deluge scripting in Zoho Creator. Every new admission enquiry is automatically queued for review, and Deluge scripts automatically notify the student while keeping the admissions team informed in real time.

Assignment 09: Basic Fields Implementation

Objective: To build a structured Admission_Enquiry_Form capturing personal identity, contact details, academic interest, counselling slots, and consent using all **thirteen Basic Field types** in Zoho Creator's Form Builder.

Problem Statement & Scope

The Admissions Office receives enquiries through calls, walk-ins, and emails, leading to fragmented records. This digital low-code form standardizes data collection, enforces field validations, and generates the Admission_Enquiry_Report for effective follow-up.

Basic Fields Mapping & Configuration Matrix

Mapping of all 13 Basic Fields available in Zoho Creator to their role in the Admission Enquiry Form:

Basic Field	Form Field Name	Field Purpose & Function	Sample Value
Name	Student_Name	Captures applicant's full name via First/Last name sub-fields	Divya Ramesh
Email	Email_Address	Captures validated email for auto-acknowledgments	divya@example.com
Address	Residential_Address	Captures full postal address (city, state, pincode)	12, Anna Nagar, Chennai
Phone	Contact_Number	Captures mobile number for call-back follow-up	+91 98765 43210
Single Line	Guardian_Name	Captures parent/guardian name as short text	R. Ramesh
Multi Line	Additional_Remarks	Captures free-text remarks & course reasons	Interested in AI & DS
Number	Class_XII_Percentage	Numeric score entry with range validation (0-100)	92
Date	Date_Of_Birth	Applicant date of birth selection via calendar picker	14-Mar-2008
Time	Preferred_Counselling_Time	Preferred time slot for counseling interaction	11:00 AM
Drop Down	Preferred_Course	Single-select list of UG/PG degree programmes	B.Tech - AI & DS
Radio	Gender	Mandatory single selection among exclusive choices	Female
Multi Select	Areas_Of_Interest	Selection of multiple extracurricular/tech clubs	Robotics, Coding Club
Checkbox	Terms_Agreement	Mandatory consent to terms and privacy policy	Checked (Agreed)

Validation Rules & Outcomes

Configured Field Validations:

- Mandatory check on Name, Email, Phone, DOB, Gender, Course, Terms.
- Percentage restricted strictly between 0 and 100.
- DOB restricted to disallow future dates.

Expected Deliverables:

- Form Builder setup displaying all 13 fields.
- Live public form preview with field validation rules.
- Report view containing sample submitted entries.
